VOICE INTERFACE NATURAL COMPUTING ENVIRONMENT

Competitive Differences from Siri and Google Assistant

01 QUALITY

High sound capture quality, mic-array for ambient sound proofing: multiple microphones that merge the sound from n sides, enhanced through algorithms of signal filtering.

02 OFFLINE USE

AI in local for offline use, then synchronize your devices when data is back. Basic functions can be controlled even when the device is not connected.

03 ADAPTED TO USAGE AMBIENT

We give control to your internal IT system, any mobile application and service on the cloud.

High adaptability of the device to the company need.

The AI is trained on the syntax and vocabulary of the specific array of company' wordings.

04 MORE FREEDOM

By using our device we do not have any limitation or dependency from the smartphone processing power, no issues on smartphone battery drainage.

Faster command recognition and processing, by advisedly processing the voice through the hardware and software.

05 PRIVACY

The data of use is proprietary of the user, we do not make use of your data

06 VOICE IS KING

User interface design, specific for 100% control just with voice. Receive feedbacks, do UNDOs, listen to your dictation.

07 CUSTOM WAKE WORD

Decide how to call the device, custom wake word.
